

# Our Commitments

*At Diana Aqua, sustainability is embedded in our DNA.*

*We valorize marine co-products while contributing to the sustainable growth of aquaculture, acting as a responsible and trustworthy partner to satisfy our customers and all our stakeholders sustainably, we found our commitments towards sustainability on 4 pillars.*

## Innovation for excellence

### **Innovation drives our growth.**

**To remain a step ahead**, we continually seek for better use of marine resources along the value chain and we innovate for our customers to meet future market needs. Thus, we maintain a high level of expertise in aquaculture.

## Quality for our customers' and consumers' trust

Feed and food safety are our main concerns.

We aim for **safe, nutritious and healthy ingredients** through a full compliance with regulations, a systematic risk assessment and specific focus on operational excellence.

## Well-being at work for the respect of people

A safe and healthy working environment is a priority for us and our stakeholders in all our activities, **to guarantee well-being at work and ensure the continuity of our operations.**

We also invite our suppliers to commit to follow the same principles of ethical and social development.

## Preserving the Environment

**Reducing our footprint is our responsibility, today and for tomorrow.** Having local suppliers and limiting our environmental footprint in terms of pollution, water and energy consumption, are part of our strategy.

All in all, we commit to preserve fish resources, thanks to ethical sourcing of co-products, optimized yield and maximized benefits for sustainable aquafeed.

*In the continuity of our group values, respect-entrepreneurship-proximity-excellence-agility, Diana Aqua's objective is to daily meet our customers' and stakeholders' expectations through these 4 commitments.*
